

Agile

User Story 1:

As a vanilla Git power-user that has never seen GiggleGit before, I want to seamlessly understand the key features and functionality of GiggleGit such that I can begin to use it without too much interference from the memes.

Task:

Design a clear tutorial for first-time users.

Tickets:

(i) Create Welcome Tutorial

- Develop a step-by-step tutorial with visual aids that explain GiggleGit's functionality and how to perform basic Git operations.

(ii) Integrate Tutorial with Onboarding flow

- Ensure the tutorial is automatically exposed to first time users, when they login and ensure there is an option to skip or revisit the tutorial later.

User Story 2:

As a team lead onboarding an experienced GiggleGit user, I want to ensure they can bypass basic tutorials and focus on advanced features so they can quickly get productive with GiggleGit's unique capabilities.

Task:

Create a fast-track onboarding process for experienced GiggleGit users.

Tickets:

(i) Implement Advanced Onboarding Toggle

- Create an option within the onboarding flow that allows users to skip beginner tutorials and opt in for an advanced setup.

(ii) Advanced Features Walkthrough

- Provide a brief walkthrough that focuses solely on GiggleGit's advanced features.

User Story 3:

As an admin responsible for managing the onboarding process, I want to monitor users' onboarding process, so I can ensure that everyone is moving seamlessly through the onboarding steps.

Task: Build Onboarding progress tracking for admins

Tickets:

(i) Design a Progress Tracking System

- Create a back-end system that tracks each user's progress throughout the onboarding flow, displaying the key milestones.

(ii) Admin Onboarding Report Page

- Develop a user interface for admins to view reports on the onboarding progress of users, including any key milestone issues.

What's Wrong with this Story?

- As a user I want to be able to authenticate on a new machine

This is not a valid user story as it lacks a clear goal or benefit for the user. This is more akin to a functional requirement. The correct user story would be: As a user, I want to authenticate on a new machine quickly and securely, so that I can easily access my account without issues when switching devices.
